SPECIAL LOCAL NEED 24(C)LABELING

DuPont™ ManKocide® Fungicide/Bactericide FOR USE ON CARROTS GROWN FOR SEED

FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF IDAHO

DuPont™ ManKocide® Fungicide/Bactericide

EPA Reg. No. 352-690 EPA SLN No. ID-080012

FOR USE ON CARROTS GROWN FOR SEED TO PREVENT BACTERIAL BLIGHT

Table with 2 columns: Ingredient Name and Percentage. Includes Active Ingredients (Mancozeb, Manganese, Zinc, Ethylenebisdithiocarbamate ion, Copper Hydroxide) and Inert Ingredients.

treatment in the seedling-to-4 leaf stage may protect against early spread and establishment.

ManKocide is a protective material and should be applied prior to establishment of infections. ManKocide will not eradicate infections which are already established, but will provide partial protection from the establishment of new infections.

Application Rate and Directions: Apply 2.5 lbs product per acre. Dilution rate should be adequate to provide thorough coverage of all leaf and stem tissue.

KEEP OUT OF REACH OF CHILDREN DANGER - PELIGRO

DIRECTIONS FOR USE It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

Instructions for Control of Bacterial blight (Xanthomonas campestris)

Timing and Frequency of Application: Apply prior to conditions conducive to infection, such as precipitation, overhead irrigation, and frost and winds strong enough to create plant wounding via blown sand and dirt.

Add ManKocide slowly to water in the spray tank with agitation, or premix thoroughly in separate holding tank for concentrate for aircraft sprayers.

During aerial application, human flaggers must be in enclosed cabs.

PRECAUTIONS AND RESTRICTIONS • ManKocide should not be applied in a spray solution having a pH of less than 6.5 as phytotoxicity may occur.

- This product may be reactive on masonry and metal surfaces such as galvanized roofing. Avoid contact with metal surfaces. Do not spray on cars, houses, lawn furniture, etc.
- Environmental conditions such as extended periods of wet weather, acid rain, etc. which alter the pH of the leaf surface may affect the performance of ManKocide resulting in possible phytotoxicity or loss of effectiveness.
- Pesticides may perform in an unpredictable manner when tank mixed especially where several products are involved. Reduced effect on pests or crop injury may occur. Unless recommended on this label or by a state/local expert, or the user has small scale direct experience, tank mixing should not be undertaken.
- Do not apply this product via chemigation
- Mixing of this product with products containing diazinon, fosetyl-al or other aluminum containing products, or thio-phanate-methyl is not recommended because of physical incompatibility.
- It must be determined in the selection process if proper application equipment is available and if the waste associated with its use can be properly handled. Materials used in the construction of application equipment is also an important factor as pesticides are often reactive with soft metals such as aluminum and even some synthetic materials such as plastics, rubbers, etc. Therefore it is necessary when working with equipment containing these materials that they are thoroughly flushed with clean water after each days use.
